

TEERAWUT SAESIM

FULL-STACK DEVELOPER

PERSONAL PROFILE

I am a full-stack developer focused on designing software architectures and building end-to-end solutions that deliver seamless user experiences. I develop and integrate AI agents to help businesses automate workflows and improve operations. I enjoy exploring new technologies, with a particular interest in hardware, circuit design, and robotics.

AREAS OF EXPERTISE

JavaScript/Typescript
ReactJS / NextJS / NuxtJS / TaroJS
React Native / Tauri
NodeJS (ExpressJS, NestJS)
Python / Golang
Git / CICD
Docker / Kubernetes
Blockchain + Smart Contract (Solidity)
Observability (Grafana Stack, Lanfuse)
Software Architecture Design
AI Agentic (LangChain Stack)
Cloud: Huawei / GCP

WORK EXPERIENCE

FULL-STACK DEVELOPER

Dragon e-tech | Apr 2024 - Present

- Design software architectures and develop full-stack solutions using microservices, cloud services, and domain-driven design principles.
- Define project structures, system components, APIs, and development standards to support scalable, maintainable software.
- Build and integrate AI agent solutions using the LangChain ecosystem to support business workflows and automation.
- Lead technical decisions on technology selection, solution design, and project implementation.
- Gather customer requirements, define project scope, contribute to TOR, and present proposed solutions and new features.
- Coordinate team activities, assign tasks, and collaborate with developers to deliver projects.
- Deploy and maintain applications, manage cloud infrastructure, and configure CI/CD pipelines.
- Set up and configure observability tools to monitor application health, investigate issues, and support reliable operations.
- Create sequence diagrams, process flows, software specifications, and pitch decks to communicate technical solutions.

FULL-STACK DEVELOPER

Finstable | November 2022 - Apr 2024

- Developed and tested full-stack web and mobile applications, including smart contract integrations.
- Collaborated with teams across administration, finance, and café operations to understand business needs and deliver software solutions.
- Worked with customers to clarify project scope, gather requirements, and define new features.
- Created sequence diagrams, process flows, software requirements specifications, and pitch decks.
- Taught frontend and backend development skills to students.
- Presented company products to international clients at the Blockchain to Government Conference (B2GC).

FULL-STACK DEVELOPER

Trienpont International Co., Ltd | June 2022 - September 2022

- Developed and tested features for full-stack web applications.
- Contributed to discussions on application workflows and technology selection.
- Evaluated and applied web development tools, technologies, and standards to improve implementation quality.
- Presented project progress and completed features to customers.

ACADEMIC HISTORY

PRINCE OF SONGKLA UNIVERSITY, PHUKET CAMPUS

Bachelor of Engineering | 2019 - 2023

- Major: Digital Engineering | GPA: 3.84
- Main Course: Web Programming, Data Structure and Algorithm, Internet of Things, AI

PROJECT EXPERIENCE

DRAGON E-TECH CORPORATION LIMITED

SBM Website

- Enabled administrators to update store listings, promotions, and events independently through CMS, reducing reliance on IT support.
- Implemented technical SEO, including metadata, structured data, robots.txt, and sitemaps, to improve content discoverability.
- Optimized page loading and image compression.
- Integrated Google Analytics and Search Console to support traffic analysis and search performance tracking.
- Configured CI/CD pipelines to automate deployments and streamline website updates.

CRM System

- Centralized customer profiles, interaction history, and shopping behavior to help administrators segment audiences and manage customer relationships.
- Enabled targeted marketing through promotions, coupon vouchers, and notifications.
- Integrated booking, surveys, and customer challenges to support mall services, collect feedback, and encourage engagement.
- Built an AI chatbot to help staff analyze customer data and answer operational questions, reducing manual reporting and information lookup.
- Automated receipt data extraction with AI to reduce manual data entry and staff workload.

FINSTABLE CO., LTD

Crypto Payment Gateway (Transcript V2)

- Enabled merchants to price orders in fiat and accept cryptocurrency payments through QR codes using the EIP-681 standard.
- Converted fiat order amounts into cryptocurrency amounts, simplifying payment initiation for merchants and customers.
- Built transaction reporting tools to help merchants review payment activity.
- Integrated cryptocurrency payments into vending machines to support automated purchases.
- Integrated with Phcpay to enable merchants to convert cryptocurrency funds into fiat through TradingPool, a dealer platform.

Fin Wallet App

- Developed a mobile wallet that enables users to store, manage, and transfer cryptocurrencies across EVM-compatible networks.
- Simplified digital asset management by bringing multiple networks into a single mobile application.

TRIENPONT INTERNATIONAL CO., LTD

Survey Back Office Website (Rabbit Rewards)

- Built a survey platform that encourages customers to share feedback by awarding points redeemable for promotions.
- Enabled administrators to create custom surveys and manage reward points without developer support.
- Visualized survey responses to help administrators understand customer feedback and inform marketing decisions.

FULL-STACK DEVELOPER

ACHIEVEMENTS

COMPLETION | 2023 - PRESENT

- 1st Prize Winner and 2 Sponsor Prize of Bitkub Blockathon 2023 by Bitkub x Near Protocol. Project name "BillBOS", Web3.0 decentralize advertisement system on Near Protocol. Users can create an Ads on BillBoard Component, and Webpage owner can embedded BillBoard component on their platform to get revenue ads owner don't need to pay any token amount.
<https://devpost.com/software/billbos>
- Joined Constellation by Chainlink, "Tradelink", web3 pear-to-pear platform user can make deal an offer NFT and Token trading through the smart contract. Tradelink also supports trading between other chains using CCIP (Cross Chain Technology)
<https://devpost.com/software/tradelink>
- 4th runner-up of Axelarthon 2023. "SuperCall", web tooling for public to be able to bundle any transactions into the pipeline and execute in one transaction and also supports cross-chain execution.
<https://devfolio.co/projects/supercall-be25>
- Sponsor Prize of ETH Online 2023. Project name "Shout Protocol" A web3 social media platform user can raise the exposure of their posts by depositing assets on the platform.
<https://ethglobal.com/showcase/shout-protocol-7fik4>
- Sponsor Prize of Hack FS 2023, ETH Global. Project name "Videfi", a web3 content platform utilizing decentralized file storage solutions, such as Filecoin, IPFS, and Lighthouse.storage, NFT storage, etc. Videfi aims to create freedom of content creation and strengthen ownership of the content of creators.
<https://ethglobal.com/showcase/videfi-nvth7>
- Joined Autonomous World 2023 hackathon by ETHGlobal and built Muddy Heart, an On-chain action RPG game powered by @lattizexyz's MUD engine.
<https://ethglobal.com/showcase/muddy-heart-cdm0k>

COMPLETION | 2022

- Consolation Prize at the final round of the National Software Contest (NSC2022) to make a digital platform that helps medical personnel manage COVID-19 case data.
